## **Bee Stinger**

A Gastight Syringe for the BASi Bee Syringe Pump  
Model-00001

### **Warning**

Laboratory syringe for research purposes. Not for human use.

**Important!** Before using this syringe remove the plunger from the barrel. Dip plunger into deionized or distilled water and re-insert into glass barrel. Move the plunger up and down five times. Movement of the syringe plunger in a dry barrel may cause excessive wear on the Teflon seat, reducing the lifetime of the seal and causing leaks.

**Cleaning:** Deionized or distilled water, acetone or methyl alcohol are all recommended cleaning solvents for this syringe. Avoid detergents, phosphates and alkalines whenever possible. Syringes may be soaked overnight in a mild solvent or immersed in an ultrasonic cleaner for a few hours if necessary
